# Tohid Hanfi

**Cloud Engineer , DevOps Engineer.**

+91 9022296145 tohidhanfi20@gmail.com Nagpur
in/tohidhanfi github.com/tohidhanfi20 𝕏 x.com/@hanfitohid

## Education

*Nagpur University - RTMNU* **Nagpur** *2019-2023*
B.E in Computer Science & Engineering
*Jspiders - Training Institute* **Bangalore** *Oct 2024 - Dec 2024*
Devops Training

## Area of Expertise

CI/CD Pipelines, Cloud Infrastructure, Terraform, Jenkins, GitHub Actions, Docker, Kubernetes, ECS, Shell Scripting, Ansible, Prometheus, Grafana, AWS, GCP, Azure, Git, Bitbucket, CloudFormation, Infrastructure as Code (IaC), Linux System Administration, Networking Basics, Vault, Monitoring, Automation, DevOps Best Practices, API, API Gateway,Agile, Agile Methodologies, Automated Testing, Bash, Cloud Computing, Complex Issues, Container, NoSQL, Process Improvement, Python, SQL, Testing, VPN.

## Technical Skills

IAC : Terraform , CI/CD :Jenkins, Jenkins, GitHub Actions , Containerization Orchestration : Docker, Kubernetes, Monitoring and Alerting : Prometheus, Grafana , Version Control : Git Secret Manager : Vault Scripting and Automation :Shell Scripting , Cloud : AWS , GCP, Azure , OS Networking: Linux (Ubuntu, Amazon Linux), Networking Basics

## Certifications

**GCP Certified Professional Cloud Devops Engineer,AWS Certified Cloud Practitioner,Microsoft Certified Administrator ,Microsoft Certified AZ-900, Cisco - Networking Essentials.** LINK

## Projects

**Farmly - The Grocery App : Jenkins, Docker, Sonarqube, Trivy, OWASP, AWS LINK**

- By implementing a seamless shopping interface, Enhanced the shopping interface, increasing customer satisfaction by 35%. making online grocery shopping more enjoyable and efficient.
- Utilizing SonarQube, Trivy, and OWASP standards significantly reduced security vulnerabilities by 45%. ensuring safer transactions and protecting customer data.
- Integrating Jenkins and Docker Streamlined deployment processes, reducing release time by 40%. reduction in release time, allowing for more frequent updates and feature enhancements.

**REAL TIME MONITORING — Prometheus Grafana, Docker, AWS,Git :LINK**

- In this project I have implementation of real-time monitoring significantly Optimized EKS cluster efficiency, minimizing downtime by 25%. and enabling prompt response to potential issues.
- I have used Amazon EKS (Elastic Kubernetes Service) Helm Chart for Kubernetes orchestration Prometheus for monitoring and alerting Grafana for visualization and dashboarding

**Task-Manager: — Jenkins, AWS, S3, Terraform, git, EKS, Nexus, SonarQube. :LINK**

- The Task-Manager application task tracking and collaboration, leading to a 30% increase in team productivity and faster project completions.
- Implemented Jenkins and Terraform for CI/CD, reducing downtime by 40%. reduction in deployment downtime, allowing for more seamless updates and enhancements.
- Utilizing SonarQube for continuous code analysis of code quality, reduces bugs in production by 25%. which significantly increased overall application performance.

**Dockerized TODO-App on EKS Cluster — Circle Ci, Git, AWS, Terraform, EKS, Docker,S3,DynamoDB. LINK**

- By utilizing ArgoCD and GitOps, Automated delivery pipelines using ArgoCD and GitOps, declined deployment time by 50%. allowing for quicker feature releases and updates.
- Deploying the application on AWS EKS with Docker optimization resulted in a 30% reduction in infrastructure costs, maximizing resource utilization while maintaining performance.
- Integrating CircleCI for CI/CD pipeline management enhanced build success rates by 40%, significantly decreasing integration issues and boosting overall development efficiency.

## Professional Experience

**Devops Engineer** *(PearlThoughts)* **Remote** *07/2025 - Current*

- Led Azure → AWS migration for multiple containerized services to ECS Fargate behind ALB, images in ECR; executed blue-green cutovers with near-zero downtime.
- Built AWS infrastructure with Terraform: VPC (public/private subnets, NAT), security groups, ECS cluster/services, ALB listeners/target groups, ECR, CloudWatch; remote state on S3 with DynamoDB locking.
- Centralized DNS and TLS on Route 53 and ACM (wildcard certs), routing service subdomains and client wildcard records to ALB target groups.
- Optimized CI/CD in GitHub Actions: multi-arch Docker builds, cached layers, parallel jobs, ECR push, and automated ECS service updates reduce build/deploy time by 50%.

**Devops Vendor** *(PearlThoughts)* **Remote** *06/2025 - 07/2025*

- Resolved Jenkins agent connectivity issues and optimized pipeline stability, ensuring smooth execution of CI/CD workflows and eliminating pipeline failures by over 50%.
- Identified and fixed critical database connection errors in deployment pipelines, leading to improved application reliability and minimizing deployment downtime.
- Successfully deployed new application versions to production, collaborating with development teams to implement efficient and error-free release processes.

**GCP Cloud Engineern** *(DC Info Tech Pvt Ltd)* **Remote** *03/2025 - 05/2025*

- Collaborate with the engineering team to design, develop, and implement cloud-based solutions using Google Cloud Platform (GCP) to support various software projects. resolving which increased the efficiency upto 50%.
- Assist in monitoring, troubleshooting, and optimizing existing cloud infrastructure and applications, ensuring high availability and performance for business operations.
- Maintain comprehensive documentation of cloud architecture and processes, while regularly reporting progress and findings to the internship supervisor for continuous improvement and learning. which increased performance by 20%.

**Freelancer** *(Cloud/Devops)* **Remote** *01/2025 - 02/2025*

- Monitoring Setup: Successfully configured Prometheus, Grafana, and Loki for comprehensive monitoring and logging, enhancing system observability and performance tracking.
- Secrets Management Migration: Transferred sensitive secrets from AWS Secrets Manager to HashiCorp Vault, ensuring improved security and centralized management of credentials.
- Technical Expertise: Demonstrated strong proficiency in cloud technologies and DevOps practices, contributing to streamlined operations and robust infrastructure management.

## Achievements & Hobbies

- Earned 3+ certifications from top MNC's (AWS, Google, Microsoft, Oracle).
- I like to play various online and offline games.
- I like to read tools documentations to remain updated with technologies.
